HerdGuard Feed-Thru and Premix

Diflubenzuron IGR Solutions For Horn, Stable, House and Face Fly Control

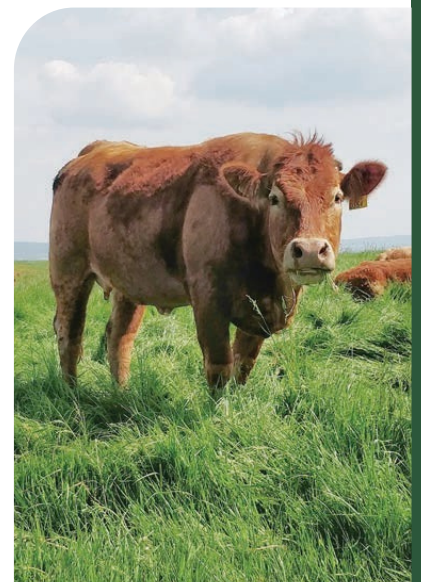

The Problem: Flies

- Flies are the leading vector for spreading and causing disease like pink eye and mastitis.
- Flies cause reduced milk production, reduced weight gain and reduced weaning weight
- Flies are the number one economic pest for cattle in North America

The Solution: Pertinent HerdGuard Feed-Thru and Premix

HerdGuard Premix and HerdGuard Feed-Thru are intended for blending into cattle rations to prevent the development and emergence of infestations of horn fly, stable fly, house fly and face fly in the manure of treated beef and dairy cattle and calves. Feed-Thru Fly Control is a critical component of any integrated pest management program for confined cattle.

When mixed with cattle supplements, diflubenzuron, the active ingredient in Pertinent Ag HerdGuard Premix, passes through the digestive tract and into the feces in sufficient concentration to kill fly larvae. Pertinent Ag HerdGuard Premix controls the infestation by inhibiting the development of horn fly, stable fly, house fly and face fly larvae in the manure and feces of treated animals but is not effective against existing adult flies.

- Unlike Ear Tags, Back Rubbers, and Sprays, there's no extra work rounding up or handling cattle.
- HerdGuard works on flies resistant to ear tags, sprays and fly baits
- No withdrawal times are required before culling or milking.

HerdGuard Premix

For on-site, on-farm mixing

ACTIVE INGREDIENT: Diflubenzuron* (CAS# 35367-38-5).....0.67%
OTHER INGREDIENTS:.....99.33%
TOTAL:.....100.00%

*Contains 3.04 g of diflubenzuron/lb

HerdGuard Cattle Feed-Thru

For large-scale mixing

ACTIVE INGREDIENT: Diflubenzuron* (CAS# 35367-38-5).....3.00%
OTHER INGREDIENTS:.....97.00%
TOTAL:.....100.00%

*Contains 13.62 g of diflubenzuron/lb
