To determine the proper amount of **HerdGuard Premix** per ton of feed to prevent horn fly emergence, multiply the factor by the CWT and divide by the feed rate

EXAMPLE:

Pounds of **HerdGuard Premix** needed in a ton of feed to prevent horn flies on a 1,200 lb. animal consuming 4 oz. of mineral per day

$$\frac{3 \times 12 \text{ CWT}}{0.25 \text{ lbs. of feed per day per animal}} = 144 \text{ lbs. of HerdGuard Premix per ton of feed}$$
